

NEW!

On basis of oil and soap

Preparing today for tomorrow

Floor soap with automatic oil maintenance

WOCA Oil Refresher is a practical new product making the maintenance and care of your oiled wood floor even easier.

An oiled wood floor has a beautiful and natural appearance as well as a strong and dirt resistance surface. The only drawback is that the owner of the floor may not have time to maintain the floor as regular as it should be done and gets frustrated as the floor needs regular maintenance and care with maintenance oil. And it may be hard to find time for this necessary regular maintenance.

However, now a large part of this problem has been solved by WOCA without additional effort - as a free bonus to the regular cleaning. WOCA Oil Refresher the name of a new wood floor soap developed by WoodCare Denmark. This product differs

from all other soaps by having a "build-in" content of oil. This means that you automatically oil your wood floor every time you wash it.

WOCA Oil Refresher enhances the grain and natural colour of the wood even after repeated use because the oil penetrates the wood, and at the same time leaves a mat protective film on the surface. When cleaning with a traditional soap the wood floor may look a little dry in times because the soap "wears" out the oil treatment, making it necessary to re-oil the floor with the WOCA Maintenance Oil periodically.

WOCA Oil Refresher can be used for cleaning, maintenance and care of oiled wood floors. You use and apply WOCA Oil Refresher in exactly the same easy way as a traditional wood floor soap. However,

WOCA Oil Refresher cannot totally replace treatment with maintenance oil, but it reduces the number of oil treatments and makes it much easier to look after the real wood floor.

WOCA Oil Refresher is available in containers of 1.0 and 2.5 litre and in the colours Natural and White.
